

VictoryCashCoin Project Details

Introduction

VictoryCashCoin is a low supply deflationary BEP20 token on the BNB Chain (A.K.A Binance Smart Chain). VictoryCashCoin is a fair-launched project with no presale, private sale, venture capitalist funding, or any type of private investors that would have any advantage over new investors.

The initial and max supply of VictoryCashCoin is 50,000 coins.

Over time as users buy, sell, make transfers, and stake VICC

(VictoryCashCoin) the supply will be taken out of circulation which in theory can attribute to price appreciation

Staking Details

When an individual stakes their VICC the initial deposit amount is considered burned and can not be unstaked. The individual will then receive 1.5% a day, until they receive an max payout of 265% which is based upon the amount staked. If an individual stake \$6000 worth of VICC they would earn \$90 a day with a max roi of \$15,900. It will take approximately 67 days for the individual to receive their initial deposit amount back. Once the 67 days is up anything that an individual earns is pure profit. We also have a shorter term staking option that pays 5% a day with a max payout of 30% (5% a day, 20 days = 100% which is your initial deposit plus 6 days = 30% profit). All payouts happen in VICC tokens and VICC tokenomics support price appreciation over time.

This means that if VICC appreciates in value your roi in USD is higher. There will only be 50,000 VICC tokens ever created and no more will ever be minted. However, there will be tokens set aside to pay out stakers and on top of that there is tokenomics built into the token to support stakers as well

Audit

VictoryCashCoins has been audited by an independent auditing companies.

Solidity Finance has concluded that VICC smart contracts are secure and

hacker proof. Please check out both audit reports down below

Token Information & Distribution

VictoryCashCoin (VICC) Contract:

Initial Supply: 50,000 token

Token Distribution Details : PancakeSwap (80%), Immediate Staking Rewards (10%), Future Staking Rewards (5%), Marketing Wallet 1%, and finally Developer Bonus (4%).

Token Distribution Explained: 48,080 tokens will be added to pancakeswap for users to trade. 6,010 tokens will be placed in a smart contract to payout initial stakers who stake VICC.

Developers has no access to these 6,010 tokens. 3,005 tokens will be placed in a token lock smart contract that will lock these tokens for 2 years. These tokens will be used in the future for staking rewards when the 10% initial rewards run out. VICC is not an inflationary token, no more can ever be minted, however we will think of a way to reward users long term throughout the years. 601 tokens will be held by the developer for marketing and developmental purposes. The dev and marketing wallet is down below. 2,404 tokens will be locked away in a smart contract for two years and this will be the developers tokens for creating VictoryCashCoin

Dev Wallet:

Treasury & Lp Leveraging

In order to keep the staking protocol of VICC sustainable to VICC

team plans on partnering with pancakeswap in order to get

farming pools open that utilizes VICC/BNB lp tokens. Once this

partnership is completed we can leverage our platforms lp to

earn yield in order to do continuous buy backs. PancakeSwap

also occasionally updated their decentralize exchange. With

this in mind we will keep our lp lock on a rotating schedule
